

Name:  Annan

Instructor: Samuel Chukwuemeka

Objectives:

- (1.) I shall convert a measurement from a customary unit to a metric unit.
- (2.) I shall convert a measurement from a metric unit to a customary unit.

Measurement: Volume

First Unit: Fluid Ounces

To convert to: Milliliters

Second Unit: Milliliters

To convert to: Fluid Ounces

Container: Red Bull Can

First Conversion: Convert 12 fluid ounces to milliliters

From the tables that were given:

$$1 \text{ gal} = 128 \text{ fl. oz}$$

$$1 \text{ L} = 0.26417205 \text{ gal}$$

$$1 \text{ mL} = 10^{-3} \text{ L}$$

Conversion from exponent to decimal format:

$$10^{-3} \text{ L} = 0.001 \text{ L}$$

Unity Fraction Method:

$$12 \text{ fl. oz} * \frac{\text{gal}}{\text{fl. oz}} * \frac{\text{L}}{\text{gal}} * \frac{\text{mL}}{\text{L}}$$

$$12 \text{ fl. oz} * \frac{1 \text{ gal}}{128 \text{ fl. oz}} * \frac{1 \text{ L}}{0.26417205 \text{ gal}} * \frac{1 \text{ mL}}{0.001 \text{ L}}$$

Exact Value: 354.8823579 mL

Value on the can: 355 mL

To get this value, the exact value was rounded to the nearest whole number.

Second Conversion: Convert 355 mL to fluid ounces.

From the tables that were given:

$$1 \text{ mL} = 10^{-3} \text{ L}$$

$$1 \text{ L} = 0.26417205 \text{ gal}$$

$$1 \text{ gal} = 128 \text{ fl. oz}$$

Conversion from exponent to decimal format:

$$10^{-3} \text{ L} = 0.001 \text{ L}$$

Unity Fraction Method:

$$355 \text{ mL} * \frac{\text{L}}{\text{mL}} * \frac{\text{gal}}{\text{L}} * \frac{\text{fl. oz}}{\text{gal}}$$

$$355 \text{ mL} * \frac{0.001 \text{ L}}{1 \text{ mL}} * \frac{0.26417205 \text{ gal}}{1 \text{ L}} * \frac{128 \text{ fl. oz}}{1 \text{ gal}}$$

Exact Value: 12.00397795 *fl. oz*

Value on the can: 12 *fl. oz*

To get this value, the exact value was rounded to the nearest whole number.
