

Measurements and Units Project

Name:  Davis

Instructor: Samuel Chukwuemeka

Project: Measurements and Units

Objectives

(1.) I shall convert a measurement from a customary unit (American Unit) to a metric unit (International Unit).

(2.) I shall convert a measurement from a metric unit (International System) to a customary unit (United States System).

Measurement: (Mass)

The Customary Unit Given: (Ounce)

Metric Unit to Find: (Gram)

Metric Unit given: (Gram)

Container: Apple & Cinnamon Instant Oatmeal

Conversion from Customary Unit to Metric Unit

First Conversion: Convert 24.69 ounce to gram

Method Used: Unity Fraction Method

From the Tables that were given:

$$1lb = 453.59237g$$

$$1lb = 16oz$$

I shall be using the Unity Fraction Method

$$\dots oz * \frac{\dots lb}{\dots oz} * \frac{\dots g}{\dots lb}$$

$$24.69 \text{ oz} * \frac{1 \text{ lb}}{16 \text{ oz}} * \frac{453.59237 \text{ g}}{1 \text{ lb}}$$

$$= 699.949726 \text{ g}$$

Value on the container = 700 g

The calculated value was rounded to the nearest integer to get the value on the container.

Conversion from Metric Unit to Customary Unit

Second Conversion: Convert 700 grams to ounces

Method Used: Unity Fraction Method

From the Tables that were given:

$$1lb = 453.59237g$$

$$1lb = 16oz$$

I shall be using the Unity Fraction Method

$$\dots g * \frac{\dots lb}{\dots g} * \frac{\dots oz}{\dots lb}$$

$$700 g * \frac{1 lb}{453.59237 g} * \frac{16 oz}{1 lb}$$

$$= 24.69177336 oz$$

Value on the container = 24.69 oz

The calculated value was rounded to the nearest hundredths to get the value on the container.
