

Measurements and Units Project

Name: Erik 

Instructor: Samuel Chukwuemeka

Objectives: I shall convert a measurement in customary system of unit to its equivalent in metric system.

I shall convert a measurement in metric system of unit to its equivalent in customary system.

Measurement: Volume

1st Given unit: Fluid Ounce

To convert to: Liters

2nd Given Unit: Liters

To convert to: Fluid ounces

Container Used: Hand Sanitizer Container

I shall do the conversion from metric system to customary system.

I shall convert 2 liters to fluid ounces

The conversions I shall use are:

$$1 \text{ liter} = 0.26417205 \text{ gallons}$$

$$1 \text{ gallon} = 128 \text{ fluid ounces}$$

Let me set up the units.

$$2 \text{ liters} * \frac{\text{gallon}}{\text{liter}} * \frac{\text{fluid ounces}}{\text{gallons}}$$

I shall use the Unity Fraction Method.

$$2 \text{ liters} * \frac{0.26417205 \text{ gallon}}{1 \text{ liter}} * \frac{128 \text{ fluid ounces}}{1 \text{ gallon}}$$

$$= 67.6280448 \text{ fluid ounces}$$

But the measurement on the container is 67.6 *fluid ounces*.

The result from my calculation was rounded to the nearest tenth to give the measurement on the container.

I shall do the conversion from metric system to customary system.

I shall convert 67.6 fluid ounces to liters

The conversions I shall use are:

$$1 \text{ liter} = 0.26417205 \text{ gallons}$$

$$1 \text{ gallon} = 128 \text{ fluid ounces}$$

Let me set up the units.

$$67.6 \text{ fluid ounces} * \frac{\text{gallon}}{\text{fluid ounces}} * \frac{1 \text{ liter}}{\text{gallons}}$$

I shall use the Unity Fraction Method.

$$67.6 \text{ fluid ounces} * \frac{1 \text{ gallon}}{128 \text{ fluid ounces}} * \frac{1 \text{ liter}}{0.26417205 \text{ gallons}}$$

$$= 1.999170616 \text{ liters}$$

But the measurement on the container is 2 liters.

The result from my calculation was rounded to the nearest whole number to give the measurement on the container.
