

Name:  McDorman

Instructor: Samuel Chukwuemeka

Objectives:

- (1.) I shall convert a measurement from a customary unit (ounce) to a metric unit (gram).
- (2.) I shall convert a measurement from a metric unit (gram) to a customary unit (ounce).

Measurement: Mass

First Unit: Customary Unit (Ounce)

To convert to: Metric Unit (Gram)

Second Unit: Metric Unit (Gram)

To convert to: Customary Unit (Ounce)

Container: Disinfecting Wipes Container

First Conversion: Convert 9.2 ounce to gram

From the Tables that were given:

$$1 \text{ lb} = 453.59237 \text{ g}$$

$$1 \text{ lb} = 16 \text{ oz}$$

$$\text{This implies that: } 16 \text{ oz} = 453.59237 \text{ g}$$

I shall be using the **Unity Fraction Method**

$$9.2 \text{ oz} * \frac{\dots g}{\dots \text{oz}}$$

$$9.2 \text{ oz} * \frac{453.59237 \text{ g}}{16 \text{ oz}}$$

$$= 260.8156128 \text{ g}$$

$$\text{Measurement on the container} = 260 \text{ g}$$

The calculated measurement was rounded down to get the measurement on the container.

Second Conversion: Convert 260 gram to ounce

From the Tables that were given:

$$1 \text{ lb} = 453.59237 \text{ g}$$

$$1 \text{ lb} = 16 \text{ oz}$$

This implies that: $16 \text{ oz} = 453.59237 \text{ g}$

I shall be using the **Unity Fraction Method**

$$260 \text{ g} * \frac{\dots \text{oz}}{\dots \text{g}}$$

$$260 \text{ g} * \frac{16 \text{ oz}}{453.59237 \text{ g}}$$

$$= 9.171230107 \text{ oz}$$

Measurement on the container = 9.2 oz

The calculated measurement was rounded to get the measurement on the container.
